EDUCATION

Master of Science, Computer Science | University at Albany May 2024 | Albany, NY
GPA: 3.92 / 4, **Related Courses:** Software Engineering, Data Mining, Algorithms and Data Structures
Recognition: Outstanding Masters' Captstone Award

Bachelor of Engineering, Information Technology | University of Mumbai Oct 2020 | Mumbai, India
GPA: 3.88 / 4, **Related Course:** Internet Programming, Database Administration, Project Management

SKILLS

Programming Languages	Javascript, Typescript, HTML, CSS, Python, GraphQL
Libraries & Frameworks	ReactJS, NextJS, AngularJS, NodeJS, React Native, TailwindCSS, MaterialUI, OpenAI, Jest
Tools & Platforms	Git, Docker, Figma, Postman, Selenium, PostgreSQL, MongoDB, AWS, JIRA
Content & Management & Systems	Wordpress, Webflow, Shopify, Wix

EXPERIENCE

Freelance Developer, Clients: UAlbany, MrHumanity Media, Incline Sep 2024 - Present

- Built fully customized WordPress, Webflow, and Shopify websites by coding advanced functionalities with HTML, CSS, and JavaScript, ensuring speed, performance and tailored designs.
- Implemented e-commerce functionality, including payment gateways, product catalogs, and inventory management.
- Customized themes and templates to align with client branding and functionality requirements.
- Managed Content Management System and Integrated third-party tools and plugins for advanced functionality.
- Designed and developed a rating system for an educational tool built in AngularJS that provides rubric-based assessments.
- Built an excel bulk rating upload feature to consistently update MongoDB resulting in 99% reduction in manual efforts.
- Automated workflows with Docker containers for consistent environments and faster onboarding of new developers.

Graduate Assistant | Javascript Developer & Teaching Assistant, University at Albany Mar 2023 - May 2024

- Led the development of over 5 projects using ReactJS, AngularJS, and NodeJS for the software engineering lab.
- Developed an automated academic decision-making tool that uses NLP to present critical data in an easy-to-review format.
- Worked on over 10 new features in the legacy AngularJS 1.x codebase while ensuring compatibility with modern frameworks.
- Introduced a GraphQL middleware layer for efficient MongoDB queries separating filtering logic from endpoint processing.
- Resolved over 25 critical bugs affecting core functionalities resulting in reduced user reported issues by 40%.
- Mentored 100+ graduate students in modern web technologies with workshops and code reviews on the MERN stack.
- Designed scalable layouts using TailwindCSS and MaterialUI to improve UI development efficiency by 50%.

Software Engineer, Solvitute Pty. Ltd. Jan 2021 - Aug 2022

- Built a scalable enrollment platform, reducing form development time by 90% with JSON-driven specifications.
- Optimized load time by 70% using lazy loading, conditional rendering, and code splitting.
- Designed RESTful APIs using OpenAPI Specification (Swagger) for over 5 microservices across 2 projects.
- Established CI/CD pipelines on AWS for efficient and consistent deployment process.
- Performed quality assurance tests to achieve 100% cross-browser compatibility and mobile responsiveness.
- Created a design system to improve UI consistency and code maintainability among a team of 5+ members.
- Facilitated Agile practices by leading sprint planning and retrospectives in JIRA to deliver 10+ user stories per sprint.

PROJECTS

LEAPs: An AI-partner system for seamless LMS and GenAI interface integration Jan 2024 - May 2024

- Developed a NodeJS microservice integrating the OpenAI API to deliver personalized learning experiences.
- Built a real-time chat feature using WebSocket to enhance student engagement through instant feedback.
- Integrated AI-powered insights to improve learning outcomes by providing actionable data to both students and instructors.

KF Student Dashboard: An analytics dashboard to track student progress and analyze word usage Aug 2023 - Dec 2023

- Created a ReactJS dashboard with interactive charts to track student vocabulary growth and weekly word usage.
- Developed a Python server using spaCy for text lemmatization and key phrase extraction, enhancing content accuracy.
- Integrated data visualization and insights to support personalized learning and progress tracking.

DocXtract: Service that converts handwritten text from document images into digital text Jan 2023 - May 2023

- Developed a React Native mobile app and Python script to convert handwritten text into digital format with 95% accuracy.
- Built an administrative web app using ReactJS and TailwindCSS to manage and organize converted content.
- Improved the document processing efficiency by reducing manual data entry errors and time needed.
